Nuveen Global Credit Impact Bond Fund

Fund description

An actively managed global bond strategy that invests primarily across investment grade corporate fixed income securities that demonstrate direct and measurable environmental and social impact. The Fund is reporting as an Article 9 fund under the Sustainable Finance Disclosure Regulation (SFDR).

The Fund is actively managed and is not managed in reference to a benchmark. Investors invest in shares of the Fund. The Fund is suitable for long-term investors that are prepared to accept a moderate to high level of volatility. Please see the Key Investor Information Document(s) for more information. For more information on sustainability-related aspects please refer to nuveen.com/global.

Investment philosophy

We believe embedding RI standards into actively managed fixed income can:

- · Deliver attractive risk-adjusted returns
- · Add incremental return and reduce risk over market cycles
- Diversify traditional fixed income allocations
- Finance positive and environmental outcomes

We seek to:

- Consistently outperform the global corporate bond market on both an excess and risk-adjusted return basis
- Lower the cost of capital for environmental and social projects by funding initiative through the easily accessible, liquid public fixed income markets

Important information on risk

Investing involves risk; principal loss is possible. There is no guarantee the Fund's investment objectives will be achieved. Because the Impact Criteria and/or Nuveen's Environmental Social Governance (ESG) investment criteria may exclude investments of certain issuers for non-financial reasons, the Fund may forgo some market opportunities available to funds that do not use these criteria. This may cause the Fund to underperform the market as a whole or other funds that do not use an Impact Criteria or ESG investment strategy or that use a different methodology or different factors to determine an investment's impact and/or ESG investment criteria. Non-U.S. investments involve risks such as currency fluctuation, political and economic instability, lack of liquidity and differing legal and accounting standards. These risks are magnified in emerging markets. Credit risk arises from an issuer's ability to make interest and principal payments when due, as well as the prices of bonds declining when an issuer's credit quality is expected to deteriorate. Interest rate risk occurs when interest rates rise causing bond

prices to fall. The issuer of a debt security may be able to repay principal prior to the security's maturity, known as prepayment (call) risk, because of an improvement in its credit quality or falling interest rates. In this event, this principal may have to be reinvested in securities with lower interest rates than the original securities, reducing the potential for income. Investments in below investment grade or high yield securities are subject to liquidity risk and heightened credit risk. Investments in debt securities issued or guaranteed by governments or governmental entities are subject to the risk that an entity may delay or refuse to pay interest or principal on its sovereign debt because of cash flow problems, insufficient foreign reserves, or political or other considerations. In this event, there may be no legal process for collecting sovereign debts that a governmental entity has not repaid.
