This table is for illustrative purposes only and is not intended to represent actual performance, or to predict future performance, of any Nuveen product.

Certain taxpayers may find their effective marginal tax rates to be greater than those shown in the table. Those investors would need a higher taxable equivalent yield than those shown here to equal the corresponding tax-free yield. With respect to investments that generate qualified income that is taxable at a maximum rate of 20%, the taxable equivalent yield is lower.

Income may be subject to local taxes, as well as the federal alternative minimum tax. There is no assurance that state tax rates will remain unchanged.

* Combined Tax Rate includes Federal, State and New York City income taxes. The table assumes that federal taxable income is equal to state income subject to tax, and in cases where more than one state rate falls within a federal bracket, the highest state rate corresponding to the highest income within that federal bracket is used. Please note that the table does not reflect (i) any federal or state limitations on the amount of allowable itemized deductions or any phase-outs of exemptions or credits, (ii) any local taxes imposed (other than New York City) or (iii) any alternative minimum taxes or any taxes other than personal income taxes. The Combined Tax Rate has been rounded to the nearest 1/10 of 1%. In addition, please note that the Combined Tax Rate does not take into account the limited deductibility, if any, of state and local tax in computing federal tax. If this limited state and local tax deduction were taken into account in computing the Combined Tax Rate, the Combined Tax Rate (and corresponding taxable equivalent yields) for certain taxpayers would be lower than the chart indicates. Further, the table does not reflect the New York supplemental income tax based upon a taxpayer's New York taxable income and New York adjusted gross income.

** This is the maximum stated regular federal tax rate of 37.0% plus the 3.8% medicare tax imposed on the net investment income of certain taxpayers. The medicare tax also applies to many taxpayers in other tax brackets.

Important information on risk

Investing involves risk; principal loss is possible. Investing in fixed income investments involves risks such as market risk, credit risk, interest rate/duration risk, call risk, tax risk, political risk, economic risk, and income risk. Typically the value of, and income generated by, fixed income investments will decrease or increase based on changes in market interest rates. As interest rates rise, bond prices fall and as interest rates fall, bond prices rise. Income is only one component of performance and investors should consider all of the risk factors for an asset class before investing. Credit risk refers to an issuer's ability to make interest and principal payments when due. Municipal Bond Income is generally exempt from regular federal income tax and may be subject to state and local taxes, based on the investor's state of residence, as well as to the federal alternative minimum tax (AMT). Capital gains, if any, are subject to tax. Income from municipal bonds could be declared taxable because of unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of a bond issuer.

Before investing, carefully consider fund investment objectives, risks, charges and expenses.
