2024 | Nuveen Lifecycle Index Funds

An easy way to save for retirement

Building a retirement portfolio that aligns with your long-term savings goals can be a challenge. And, as you get closer to retirement, your goals can evolve.

Since I plan to work for 40 more years, I want my money to work as hard as I do.

I'm 25

I'm 45

I need my money to work through market ups and downs.

I want to keep my money working so I'll have enough to live on during my retirement.

I'm 60

A white glider is shown in flight, viewed from a low angle, against a dark, textured background of a forest. The glider's long wings and tail are clearly visible.

Investing for retirement was never easier

An investment in a Nuveen Lifecycle Index Fund can bring you through your working years and retirement. The Nuveen Lifecycle Index Funds are target date funds and provide one single investment that is fully diversified and adjusts over time. This means you won't have to make investment, allocation and rebalancing decisions on an ongoing basis.

Working years

During earlier periods, the Lifecycle Index Funds provide broad exposure to equity investments to offer opportunity for asset growth. As retirement approaches, we gradually increase fixed-income investments to potentially lower risk and increase the stability of returns.

During retirement

Once you retire, we continue to increase exposure to fixed-income investments and seek to strike the right balance between the need for current income and continued portfolio growth. The goal is to reduce the risk of you outliving your money.

Nuveen Lifecycle Index Funds glidepath

Fully diversified and professionally managed

With diversified exposure across asset classes, the Nuveen Lifecycle Index Funds integrate risk management into decision making to help minimize volatility and seek to improve the consistency of returns over time. Portfolio managers John Cunniff and Steve Sedmak, along with a dedicated, experienced team of investment professionals, monitor and manage the Funds to ensure that proper levels of risk and a long-term focus are maintained. And because these funds invest in Nuveen Index Funds, you get daily access to portfolio information while keeping costs low.

What is a Glidepath?

The glidepath is the change over time in the asset allocation, or mix of investments, through your retirement date. The Nuveen Lifecycle Index Funds' glidepath is based on more than 60 years of experience managing asset allocation strategies, as well as a sophisticated modeling process designed to balance market risk with longevity risk, or the risk that you outlive your money.

John Cunniff, CFA
Head of Target Date Multi-Asset Team
32 years of investment experience

Steve Sedmak, CFA
Portfolio Manager
24 years of investment experience

“Our goal is to deliver better outcomes — not just saving to retirement — but also through retirement.”

— John Cunniff

Why Nuveen Lifecycle Index Funds?

Effective 01 May 2024, the name of the Fund changed from TIAA-CREF Lifecycle Index Fund to Nuveen Lifecycle Index Fund. This change did not impact any of the underlying Funds' investment strategies or portfolio management.

This material is not intended to be a recommendation or investment advice, does not constitute a solicitation to buy, sell or hold a security or an investment strategy, and is not provided in a fiduciary capacity. The information provided does not take into account the specific objectives or circumstances of any particular investor, or suggest any specific course of action. Investment decisions should be made based on an investor's objectives and circumstances and in consultation with his or her financial professional.

The target date is the approximate date when investors plan to start withdrawing their money. The principal value of the funds is not guaranteed at any time, including at the target date.

Mutual fund investing involves risk; principal loss is possible. There is no guarantee the Fund's investment objectives will be achieved and the **target date** is an approximate date when investors may begin withdrawing from the Fund. Target-date mutual funds are actively managed, so the **asset allocation** is subject to change and may vary from that shown. After 30 years past when the target-date has been reached, the funds may be merged into another target-date fund with the same asset allocation. A portfolio that tracks an **index** is subject to the risk that it may not fully track its index closely due to security selection and may underperform when factoring in fees,

expenses, transaction costs, and the size and timing of shareholder purchases and redemptions. The Fund is a fund of funds subject to the risks of its **underlying funds** in proportion to each Fund's allocation. These risks include those of **fixed-income** underlying funds risks which may be susceptible to general movements in the bond market and are subject to credit and interest rate risks as well as those of **equity** underlying funds risks, such as foreign investment and issuer risks.

Credit risk arises from an issuer's ability to make interest and principal payments when due, as well as the prices of bonds declining when an issuer's credit quality is expected to deteriorate.

Interest rate risk occurs when interest rates rise causing bond prices to fall. The Fund's **income** could decline during periods of falling interest rates. **Non-U.S. investments** involve risks such as currency fluctuation, political and economic instability, lack of liquidity and differing legal and accounting standards. These fixed-income underlying funds risks, such as call, extension, and income volatility risks as well as other risk considerations, such as active management risk and equity underlying funds risks, are described in detail in the Fund's prospectus.

Before investing, carefully consider fund investment objectives, risks, charges and expenses. For this and other information that should be read carefully, please request a prospectus or summary prospectus from Nuveen at 800.752.8700 or visit nuveen.com.
