

Nuveen Variable Rate Preferred & Income Fund (NPFD)

Marketing communication | 4Q 2025 | As of 31 Dec 2025

Fund description

The Fund seeks to provide a high level of current income and total return by investing in primarily investment grade, variable rate preferred securities and other variable rate income-producing securities from high quality, highly regulated companies such as banks, utilities and insurance companies. All, or almost all, of the Fund's distributions of net investment income are expected to be treated as qualified dividend income (QDI) which is generally taxed at a lower rate than interest and ordinary dividend income, assuming holding period and certain other requirements are met.

The Fund may invest up to 20% of Managed Assets in contingent capital securities or contingent convertible securities (CoCos) and up to 15% in companies located in emerging market countries but will only invest in U.S. dollar denominated securities. More than 25% of Managed Assets will be invested in securities of companies in the financial services sector.

1 Total Investment Exposure is the total of the Fund's managed assets plus any additional economic exposure the Fund has due to its investments in certain securities.

2 Effective leverage is the Fund's effective economic leverage, and includes both regulatory leverage and the leverage effects of certain derivative investments in the Fund's portfolio that increase the Fund's investment exposure. Regulatory leverage consists of preferred shares issued by or borrowings of a fund. Both of these are part of a fund's capital structure. Regulatory leverage is subject to asset coverage limits set in the Investment Company Act of 1940. For more information, see Understanding Leverage on www.nuveen.com/cef.

3 Debt characteristics (duration, maturity, bond price) are relative to the percentage of the portfolio invested in debt securities.

Important information on risk

Investing in closed-end funds involves risk; principal loss is possible. There is no guarantee the Fund's investment objectives will be achieved. Closed-end fund shares may frequently trade at a discount or premium to their net asset value. **Preferred securities** are subordinated to bonds and other debt instruments in a company's capital structure, and therefore are subject to greater credit risk. **Debt or fixed income securities** such as those held by the Fund, are subject to market risk, credit risk, interest rate risk, derivatives risk, liquidity risk, and income risk. As interest rates rise, bond prices fall. **Lower credit** debt securities may be more likely to fail to make timely interest or principal payments. **Leverage** increases return volatility and magnifies the Fund's potential return and its risks; there is no guarantee a fund's leverage strategy will be successful. Certain types of preferred, hybrid or debt securities with special loss absorption provisions, such as **contingent capital securities** (CoCos), may be or become so subordinated that they present risks equivalent to, or in some cases even greater than, the same company's common stock. These loss absorption features work to the benefit of the security issuer, not the investor (this fund). These and other risk considerations, including the Fund's **limited term** and **concentration risk**, are described in more detail in the Shareholder Update section of the Fund's annual report at

www.nuveen.com/NPFD-annual-report.

- Average earnings per share** and **average undistributed net investment income (UNII) per share** are estimates, using an average of the last three months, except for preferred securities funds, mortgage-backed securities funds and floating rate funds, which use an average of the last six months.
- For the percentage of the portfolio in debt, preferred and other hybrid securities, including CoCos (if any). Percentages reflect the percentage of the Fund's investment exposure callable in the timeframe relative to the "as of" date shown. The "Next 12 months" figure (if shown) includes investments that are currently callable, as well as callable in the next 12 months. Securities subject to call may not be called.

Glossary

Leverage Adjusted Effective Duration is the Fund's average effective duration adjusted for the impact of the Fund's utilization of leverage in the form of senior securities as defined by Section 18 of the Investment Company Act of 1940. Funds that utilize leverage in the form of senior securities will have a leverage-adjusted effective duration that is longer than its baseline effective duration.
