Source: Nuveen Proprietary Taxable Fixed Income Impact Framework. Utilizes most recently assigned SDG alignment. Starting 31 Oct 2024, Nuveen employed Bloomberg to be the single source of information on the hierarchy of entities thus switching from multiple vendors to one and, consequently, the ESG metrics may be slightly modified. 1) Total count of SDG alignment for all impact holdings. An individual impact holding could be aligned with up to three SDGs: Primary SDG, Secondary SDG, and Tertiary SDG based on our proprietary impact framework. Therefore, the total count of SDGs is greater than the number of impact holdings. 2) Based on the market value of impact holdings by their Primary SDG alignment. Each holding has one "primary" SDG; therefore, this graph represents 100% of the portfolio AUM held in impact designated securities. *Given that the use of proceeds for certain bonds align to both green and social projects, impact or allocation reporting from the issuer is needed to assign SDG alignment.

Our impact reporting approach

As of 31 Dec 2025

Social and environmental impact data is sourced directly from issuer disclosures, covering the most commonly reported metrics under each theme for activities occurring in 2025.

Impact data included in this report illustrate the annual outcomes of the securities in which the portfolio invested as of year-end, not a fractional calculation of the portfolio's capital alone.

We rely upon four types of issuer disclosures, listed in order of preference below. Our goal is to narrow the scope of the impact data to those activities financed directly or indirectly by the portfolio's investments, while also covering as much of the portfolio as possible.

Security-level

Data sourced from security-specific impact reports; ***most preferred***

Project-level

Data sourced from project factsheets or other reports tied to a specific project

Program-level

Data sourced from impact reports aggregating impact for a portfolio of bonds

Issuer-level

Data *sourced from annual reports covering all activities of the issuer;* ***least preferred***

Reporting Methodology

The Nuveen Responsible Investing team developed this report to provide an indication of the aggregate social and environmental impact created by the projects and organizations financed in part by the Strategy. Given the difficulty of attributing impact in proportion to the size of the Strategy's share of each bond issuance (which ranges from 0.015% to 100%), the data reflect total impact generated by the project, program, or issuer rather than the Strategy's share alone.

The report represents bonds that are classified under the Strategy's proprietary impact framework and for which relevant data are available. All impact data are sourced from publicly available issuer disclosures at the bond or project level when possible, or the program or issuer level if not. For certain U.S. renewable energy projects, U.S. Energy Information Administration data used to supplement generation data: https://www.eia.gov/.

Metrics selected for each impact theme reflect the information most commonly reported by issuers, and each metric includes data from between 1 and 59 issuers. In cases where the Strategy has a large position in a certain issuer, we prioritize selecting metrics reported by that issuer.

Highlighted country information was determined by issuer reporting or country of risk information.

Holdings with no metrics available include new projects with no results yet, projects in development, issuers with misaligned reporting timelines or with metrics that did not align with Nuveen's, and issuers for whom we could not locate impact reporting.

Important information on risk

Investing involves risk; principal loss is possible. There is no guarantee the Fund's investment objectives will be achieved. The Fund will include only holdings deemed consistent with the applicable Environmental Social Governance (ESG) guidelines. As a result, the universe of investments available to the Fund will be more limited than other funds that do not apply such guidelines. ESG criteria risk is the risk that because the Fund's ESG criteria exclude securities of certain issuers for nonfinancial reasons, the Fund may forgo some market opportunities available to funds that don't use these criteria. Credit risk arises from an issuer's ability to make interest and principal payments when due, as well as the prices of bonds declining when an issuer's credit quality is expected to deteriorate. Interest rate risk occurs when interest rates rise causing bond prices to fall. The issuer of a debt security may be able to repay principal prior to thesecurity's maturity, known as prepayment (call) risk , because of an improvement in its credit quality or falling interest rates. In this event, this principal may have to be reinvested in securities with lower interest rates than the original securities, reducing the potential for income. Non U.S. investments involve risks such as currency fluctuation, political and economic instability, lack of liquidity and differing legal and accounting standards. Investments in below investment grade or high yield securities are subject to liquidity risk and heightened credit risk.This document does not constitute an offer or solicitation to invest in the Fund and it is intended that this document be circulated only to persons to whom it may lawfully be distributed in consultation with their professional legal, tax, and financial advisers as to the suitability of any investment in light of their particular circumstances and applicable citizenship, residence or domicile.
